WIRED WEEK 10: Intermediate HTML: Using stylesheets (CSS) to control formatting and enhance consistency of site design.

Sample CSS: Redefining a <BODY> tag.

Contained within an external stylesheet; this stylesheet can link to as many web pages as you like. Stylesheets make it very easy to change text or background color from one document as opposed to the many pages that compose your web site.

```
body {  
    font-family: "Courier New", Courier, monospace;  
    font-size: 12px;  
    text-transform: none;  
    color: #660000;  
    text-decoration: none;  
    font-weight: bold;  
}
```

HOMEWORK

>Sketch 9

Finalizing and editing your website. CRITIQUE for next class, Class 11.

Remake your site using CSS to streamline color, fonts, etc.

You should now have these pages:

- (1) index.html: your splash page links to:
 - a. links.html (links page, Sketch 7)
 - b. Photo archive/tables (Sketch 9)

>Sketch 1 Digital archive: continue adding new images
